

Facts

- Entities are collections of facts (called datoms)
- Datomic and Datascript are made up of datoms
- Datoms are 4-tuples of entity id, attribute, value, and transaction
- Example: [1 :name “Bruce Wayne” 536870913]

Batman

Entity	Attribute	Value	Transaction Id
1	:alias	“Batman”	536870913
1	:name	“Bruce Wayne”	536870913
1	:age	32	536870913
1	:gender	“M”	536870913
1	:powers	“Rich”	536870913
1	:weapons	“Belt”	536870913
1	:weapons	“Kryptonite Spear”	536870913
1	:alignment	“Chaotic Good”	536870913
1	:nemesis	2	536870913
1	:nemesis	3	536870913

How do I know:

- What makes this entity distinct from others aside from its id?
- Belt and Kryptonite Spear aren’t an array?
