Girlfriend Query

```
(def gf-query
  '[:find [?gf-name ...]
    :where
    [?e :name "Peter Parker"]
    [?e :girlfriend ?gf]
    [?gf :name ?gf-name]])
```

- Just a Datalog query (Same in Datascript and Datomic)

- Find entities that are a girlfriend of Peter Parker

- Get that entity's name

Querying the Current DB

```clojure
;Current girlfriend
(d/q
  gf-query
  (d/db conn))
```
